Logic

200 POINTS

Among the assertions made in this problem there are three errors.
What are they?

(a) $2 + 2 = 4$

(b) $4 \div \frac{1}{2} = 2$

(c) $3\frac{1}{5} \times 3\frac{1}{8} = 10$

(d) $7 - (-4) = 11$

(e) $-10(6 - 6) = -10$

Logic

400 POINTS

A logician vacationing in the South Seas finds himself on an island inhabited by the two proverbial tribes of liars and truth-tellers. Members of one tribe always tell the truth, members of the other always lie. He comes to a fork in the road and has to ask a native bystander which branch he should take to reach a village. He has no way of telling whether the native is a truth-teller or a liar. The logician thinks a moment, then asks *one* question only. From the reply he knows which road to take. What did he ask?
